Want to capture dust, not just move it around?

The new MicroFeather™ Duster from O'Dell can help you apply microfiber technology to every hard-to-reach dusting job. Microfibers make the MicroFeather Duster both the softest touch and the toughest dust-grabber in the industry.

Ostrich feathers, lambswool, and polywool combined cannot equal the dust capturing potential of the MicroFeather Duster. Its construction is unique - microfiber 'feathers' are wrapped around the flexible wire core head. This flexibility allows you to customize MicroFeathers to fit into any dusting area, no matter how tight. The removable duster head is also hand launderable, allowing for hundreds more uses than a disposable dusting product.

The MicroFeather Duster can reach high places, because the handle's end is fitted with standard threads to accommodate an extension handle. Let a true dust magnet go to work for you - the MicroFeather Duster.

MICROFEATHER™

New Sizes and Colors
Tiny Microfiber hooks grab
and hold dust particles
Dusts without chemicals
Reduces bacteria and allergens
Flexible head
Launderable head is easy
to remove for washing

MICROFIBER
 lifts and locks dirt
 deep within fibers

ORDINARY DUSTERS
 push and scatter dirt
 and dust
